An ERC funded research engineer position in Developmental and Cell Biology is available at the IBDM in Marseille in the group of Frank Schnorrer. The appointment will be for one year with a possible extension for up to four years.

We are looking for a highly motivated scientist, with experience in working at an English-speaking international research institute. The research project will require a particular knowledge of imaging, image processing, genetics and experience in developmental and cell biology in general.

The Schnorrer group is located at the Institute of Developmental Biology of Marseille (IBDM), an interdisciplinary research center with a strong focus on quantitative in vivo biology, microscopy and biophysics (http://www.ibdm.univ-mrs.fr). Our group is specifically interested in how the contractile elements of muscles called sarcomeres are built during development and how they are maintained during the life of the fly.
